

# **VERY preliminary Version**

## ***IR Layout for the CDR of the LHeC***

*Following chapters are foreseen:*

*We will need contributions for three different IR options:*

- the 10 degree Version ring ring*
- the 1 degree Version ring ring*
- the linac ring Version*

Optik:

- p-Optik in the Interaction Region
- e-Optik “ ”
- Parameter list including the achievable e-emittance & Lumi
- Beam beam tune shift ... for the LHC nominal / ultimate / upgrade parameters

Geometry:

- Beam Separation at the IR (IP2 or IP8)
- ... for the nominal & upgrade bunch spacing
- ? Bypass geometries ? (may belong to the Accelerator chapter and not to the IR)

Synchrotron Light:

- Power spectrum, Ecrit
- Absorber Design, mainly to protect the Experiment

Magnet Design:

- Exotic magnets in the IR ... for the proton beam
- ... for the electron beam

Detector Geometry

- Integration of accelerator components into the detector design
- Beam pipe layout
- Forward detectors

*Possible author list ... hopelessly incomplete (as I presume !!!) :*

B. Holzer  
A. Kling (hopefully)  
J. Jowett  
M. Fitterer  
T. Pieloni (?)  
W. Herr (?)

} p & e-optics  
beam beam tuneshift  
dynamic aperture

B. Holzer      }      Geometry IP 8  
H. Burkhardt    }      Geometry Bypass  
R. Tomas        }  
F. Zimmermann   }      Geometry Linac Ring

B. Nagorny (hopefully) Synchrotron radiation

S. Russenschuck et al Magnet design

U. Schneekloth  
P. Kostka  
A. Polini  
P. van Mechelen  
R. Wallny }  
Detector Geometry  
for 1 and 10 degrees

R. Appleby et al 1 degree option  
p-optics, e-optics & geometry
