Modules on Disk 9
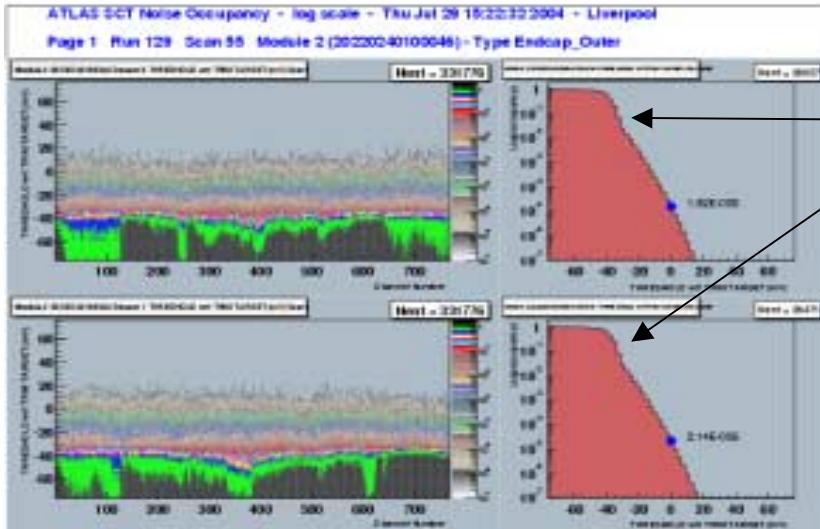

• So we are nearly able to recover the modules operation with the links in, except that we are also seeing the following:

Noise Occ. Scan with no Redundancy Links

• Discontinuities are seen on modules on the Disk.

• It is occurring at ~0.24fC

• It is <u>independent</u> of trigger rate, optical power or whether the Redundancy Links are in or not.

• Compared with the SystemTest results where there is little evidence of any discontinuity.

• Threshold scan is also more uniform.
